JOOMLA

Zygimantas Sniurevicius
DAW 2°

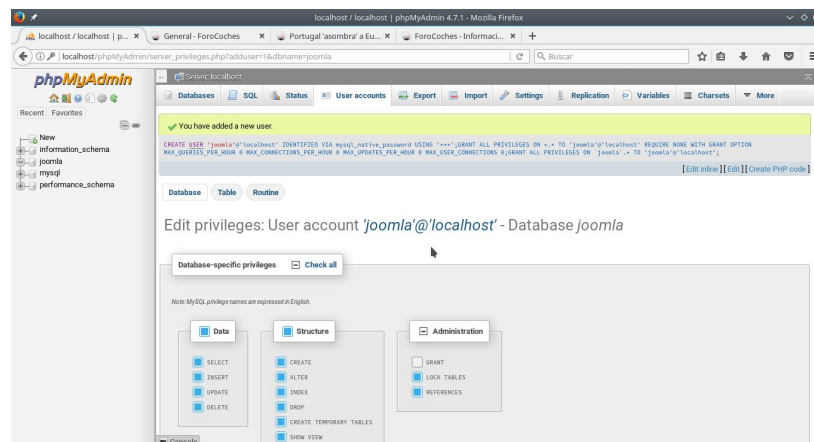

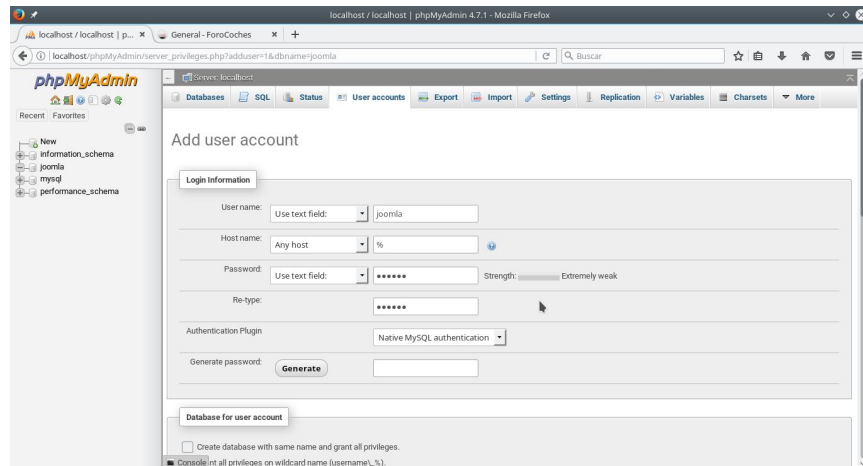

Primero nos bajamos el archivo comprimido de joomla y lo descomprimimos.

Creamos una base de datos llamada joomla en nuestro **PHPMYADMIN**

En privilegios añadimos una cuenta para específicamente para joomla mediante localhost y con todos los privilegios.

Ahora la carpeta descomprimida la metemos en srv/www/htdocs.

Una vez copiada la carpeta, podemos iniciar la instalación mediante la siguiente URL
localhost/joomla/installation

The image shows two screenshots of the Joomla! Web Installer interface in a Mozilla Firefox browser. The first screenshot shows the database configuration step with the following fields:

- Database Type: MySQL (with a note: "This is probably 'MySQL'")
- Host Name: localhost (with a note: "This is usually 'localhost' or a name provided by your host.")
- Username: root (with a note: "Either a username you created or a username provided by your host.")
- Password: [masked]
- Database Name: Joomla (with a note: "Some hosts allow only a certain DB name per site. Use table prefix in this case for distinct Joomla! sites.")
- Table Prefix: joom_ (with a note: "Create a table prefix or use the randomly generated one. Ideally four or five characters long, it may only contain alphanumeric characters and MUST end in an underscore. Make sure that the prefix chosen is not already used by other tables.")

Below these fields are buttons for "Backup" and "Remove", and a note: "Backup" or "Remove" any existing tables from former Joomla! installations with the same "Table Prefix".

The second screenshot shows the "Pre-Installation Check" and "Recommended settings" section. The "Pre-Installation Check" table lists various system requirements and their status:

Requirement	Status
PHP Version >= 5.3.10	Yes
Magic Quotes GPC Off	Yes
Register Globals Off	Yes
Zlib Compression Support	Yes
XML Support	Yes
Database Support: (mysql, mysqli, pdo, pdo_mysql, sqlite)	Yes
MB Language is Default	Yes
MB String Overload Off	Yes
INI Parser Support	Yes
JSON Support	Yes
configuration.php Writable	Yes

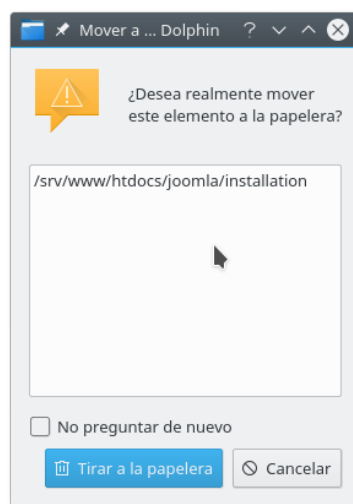

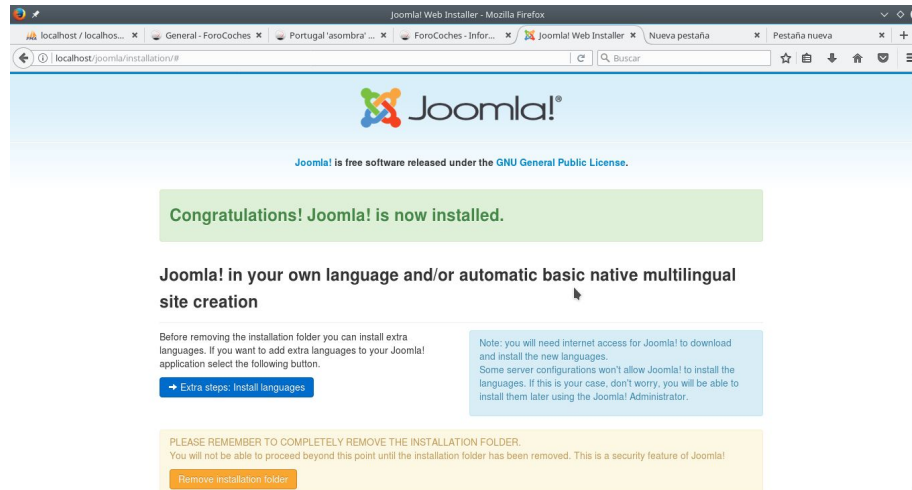

The "Recommended settings" table lists various PHP directives and their status:

Directive	Recommended	Actual
Safe Mode	Off	Off
Display Errors	Off	Off
File Uploads	On	On
Magic Quotes Runtime	Off	Off
Output Buffering	Off	On
Session Auto Start	Off	Off
Native ZIP support	On	On

At the bottom of the "Recommended settings" section are buttons for "Previous" and "Install".

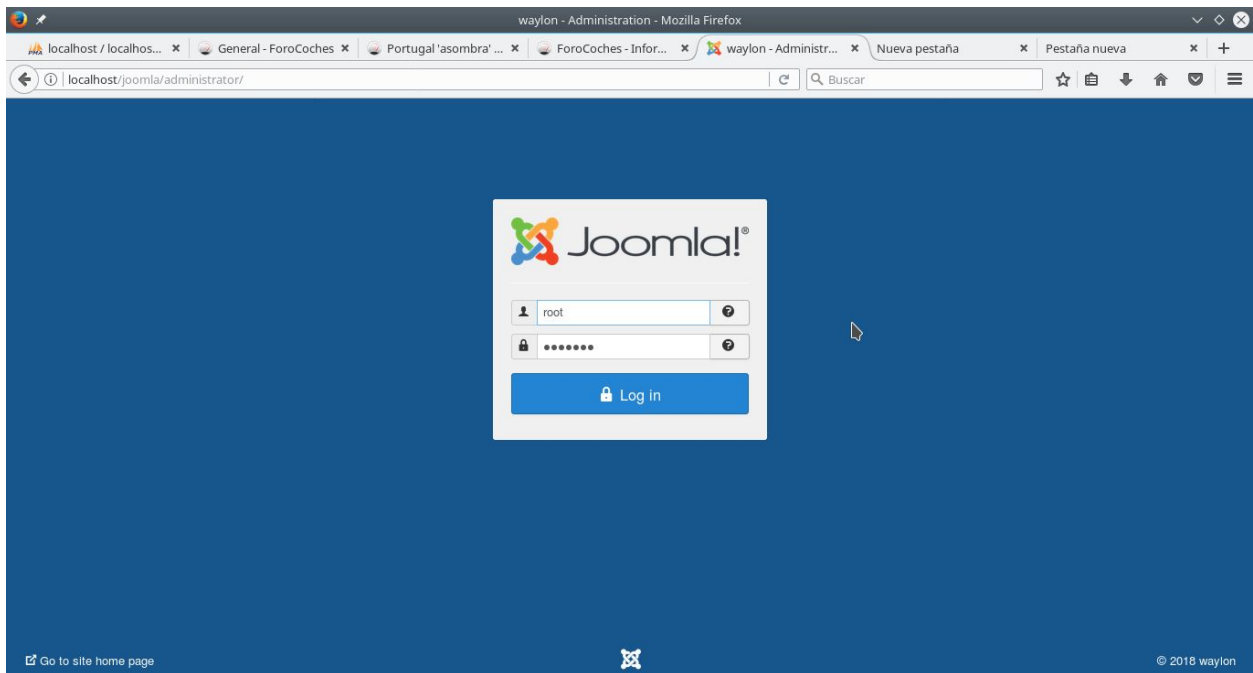

Rellenamos todos los datos que nos piden y continuamos.

Al terminar borramos la carpeta de instalacion.

Ahora podemos loguearnos en la cuenta que hemos creado previamente.

Desde localhost/joomla/administrator deberíamos ver la siguiente página.
